

Introduction

Department of Computer Engineering
Sharif University of Technology

Hamid R. Rabiee rabiee@sharif.edu

Maryam Ramezani maryam.ramezani@sharif.edu

Course Description

How is our course?

Machine Learning Mathematics

Machine Learning Mathematics

01

Linear Algebra

Provides the foundation for manipulating data in high-dimensional spaces, essential for vector operations in machine learning.

02

Statistics & Probability

Offers tools to model uncertainty and make inferences about data, forming the backbone of many machine learning algorithms.

03

Optimization

Focuses on finding the best parameters for a model by minimizing or maximizing an objective function.

04

Information Theory

Analyzes data compression and transmission, helping quantify uncertainty and information gain in machine learning models.

05

Signal Processing

Involves analyzing and transforming data signals, important for handling time-series data and feature extraction in machine learning.

06

Graph Theory

Studies networks of nodes and edges, crucial for understanding relationships in data and complex models like Graph Neural Networks.

Course Material

<https://sut-ce-courses.github.io/linearalgebra> (jabrekh.ir)

The screenshot shows the homepage of the 'Linear Algebra' course website for Fall 2025. The header features the Sharif University of Technology logo and the course title 'Linear Algebra Fall 2025'. A navigation bar includes links for HOME, SYLLABUS, SCHEDULE, LECTURES, ASSIGNMENTS, EXAMS, TA CLASS, and MATERIALS. The main content area has a heading 'Linear Algebra / Fall 2025' followed by a 'Course Description' section. The description states that the course covers matrix theory and linear algebra, emphasizing applications in image processing, computer vision, data science, machine learning, bio-informatics, social networks, and neuroscience. It also mentions that linear algebra is one of the most widely taught subjects in college-level mathematics. Below the description, there is a registration link for a 'Quera page' with the password 'LA1404' and a note that online classes will be held on 'VC Class'. The 'Previous Offerings' section lists 'Spring 2025', 'Fall 2024', and 'Spring 2024'.

Linear Algebra / Fall 2025

Course Description

This course covers matrix theory and linear algebra, emphasizing topics useful in other disciplines. Linear algebra is a branch of mathematics that studies systems of linear equations and the properties of matrices. The concepts of linear algebra are extremely useful in image processing, computer vision, data science, machine learning, bio-informatics, social networks, and neuroscience. Due to its broad range of applications, linear algebra is one of the most widely taught subjects in college-level mathematics.

Register to our [Quera page](#) to get course notifications via email. (Password: **LA1404**)

Online Classes will be held on [VC Class](#)

Previous Offerings

- [Spring 2025](#)
- [Fall 2024](#)
- [Spring 2024](#)

Course Method

- Slides

- Writing on board
- Geometric Interpretation and Intuition
- Notebooks

Structure of the Course

Lectures

Goal: To introduce concepts in linear algebra, and motivate their use and importance.

Note: We try to cover useful materials in class, but we recommend you reading more!

Exams

Quiz: 6 with dropping lowest

Midterm: 1

Final: 1

Assignments

Purpose: To give you a chance to exercise your mind, and to solidify the concepts introduced to you in class.

Structure: Seven theoretical problems, and Three linear algebra practical problems.

Importance: Not important unless you want to learn the material and get a good grade.

Lecture Notes

- Lecture slide will be uploaded.
- Many times we will write on board, in real-time, during lecture to prove a theory or answer a question or add some additional explanations. It will be your responsibility to take notes.
- Slides links will be provided on site.

Syllabus

04/07/20	S01	1	Vector Space
04/07/22	S02		Subspace
04/07/27	S03		Elementary Row Operations, and Linear Equations
04/07/29	S04		Row Reduction and Echelon Forms

04/08/04	S05	2	Linear Independence
04/08/06	S06		Linear Independence
04/08/11	S07		Bases & Dimension
04/08/13	S08		Bases & Dimension
04/08/18	S09		Matrix Rank

Syllabus

04/08/20	S10	3	Linear Transformation
04/08/25	S11		Linear Transformation
04/08/27	S12		Change Basis
04/09/02	S13		Inverse
04/09/04	S14		Determinant
04/09/09	S15		Determinant

04/09/11	S16	4	Eigenvectors, Eigenvalues, Similarity & Diagonalization
04/09/16	S17		Eigenvectors, Eigenvalues, Similarity & Diagonalization
04/09/18	S18		Symmetric Matrices and Quadratic Forms

Syllabus

04/09/23	S19	5	Matrix Factorization
04/09/25	S20		Singular Values and Singular Vectors
04/09/27	Midterm		
04/09/30	S21		SVD

04/10/02	S22	6	Inner Product Space
04/10/07	S23		Inner Product Space
04/10/09	S24		Inequalities and Orthogonality
04/10/14	S25		Orthogonality (Gram–Schmidt, etc.)

Syllabus

04/10/16	S26	7	Norm Space
04/10/21	S27		Derivatives
04/10/23	S28		Least squares
04/11/05	Final		

Assignments

- Theoretical assignments are released at the beginning of each part. You do not need to upload your responses.
- Programming Assignments: 3 points

Assignments

	Release	Deadline
T1	04/07/27	
T2	04/08/06	
T3	04/08/20	
P1	04/08/20	04/09/04
T4	04/09/11	
T5	04/09/23	
P2	04/09/23	04/10/07
T6	04/10/02	
T7	04/10/16	
P3	04/10/16	04/10/30

Exams

Quizzes will be held as the following table on 12:00 for half an hour and will be graded in Grade Scope.

Exam	Date
Quiz 1	04/08/06
Quiz 2	04/08/20
Quiz 3	04/09/16
Quiz 4	04/09/25
Midterm	04/09/27
Quiz 5	04/10/07
Quiz 6	04/10/21
Final	04/11/05

TA Classes

TA classes will be made available to you as recorded sessions through Quera and the course website.

Grading Policy

Quizzes

6 points (6 quizzes
each 1.2 points; the
lowest score will be
dropped)

Programming Assignments

3 points (each 1 point)

Midterm

6 points (Lectures part 1,2,3,4)

Final

6 points (Lectures part 5,6,7)

Total: **21** Points

Introduction

Lets think about a question!

01

Vector

Basic Concept

Data Representations (Linear Algebra)

- How can we represent data (images, text, user preferences, etc.) in a way that computers can understand?
- Organize information into a vector!
 - A vector is a 1-dimensional array of numbers.
 - It has both a magnitude (length) and a direction
- The totality of a vectors with n entries is an n-dimensional vector space

$$\vec{V} = \begin{bmatrix} -3 \\ 0.7 \\ 2 \end{bmatrix}$$

“3-dimensional space” consists
of all vectors with 3 entries:

$$\begin{bmatrix} * \\ * \\ * \end{bmatrix}$$

Data Representations (Machine Learning)

- A **feature vector** is a vector whose entries represent the “features” of an object.
- The vector space containing them is called **feature space**.

$$P = \begin{bmatrix} 64 \\ 131 \\ 24 \end{bmatrix} \begin{matrix} \text{height} \\ \text{weight} \\ \text{age} \end{matrix}$$

02

Equation with Matrix and Vector Format

House Pricing Example

Price Problem

\$ 70'000

?

\$ 160'000

Price Problem

Linear Equation without offset

$$y = af$$

How to convert it to matrix-vector multiplication?

$$Ax = b$$

Linear Equation with offset

$$y = af + c$$

How to convert it to matrix-vector multiplication?

$$Ax = b$$

House Features

- #Room
- Size
- #Bedroom
- Age
- Address features: Street, Alley, ...
- Size of part1, part2, part3, part4
- Floors
- #Bathrooms

N number of training data with M features:

$$A_{N \times M} x_{M \times 1} = b_{N \times 1}$$

Linear Equation

Least Squares Error Correction

Least Squares Error Correction

Error 1: 

Error 2: 

Error 3: 

Least Squares

Least Square Method

- Objective for “m” features:

$$\hat{y} = a_1 f_1 + a_2 f_2 + \cdots + a_m f_m + c$$

$$\min ||y - \hat{y}||$$

Linear Algebra and Machine Learning Application

- $Ax = b \rightarrow x = A^{-1}b$ Inverse of Matrix/Pseudo Inverse
- Regression

02

Road Map

Step by Step
